1.2 GENERAL INFORMATION AND COPYRIGHT

The IRE Store Channel server is an archiving application for a DICOM environment. This document describes IRE Store Channel PACS conformance. It can be used to determine whether and up to what degree IRE Store Channel PACS can cooperate with other DICOM applications.

This DICOM Conformance Statement (DCS) specifies its conformance to DICOM V3.0. It contains detailed information about the DICOM Service Classes that are supported by this product. This DCS is formatted similar to the sample template shown in DICOM PS3.2 Annex A.

Please note that this document can be changed at any time without notice. For further information, or the latest version of this document, please contact IRE Rayos X or refer to Web site: <http://www.irerayosx.com>

1.3 RELATED DOCUMENTS

This implementation is based on the Digital Imaging and Communication in Medicine DICOM® standard documents (NEMA PS 3.1-12, 1993 and following editions).

2 IMPLEMENTATION MODEL

2.1 APPLICATION DATA FLOW DIAGRAM

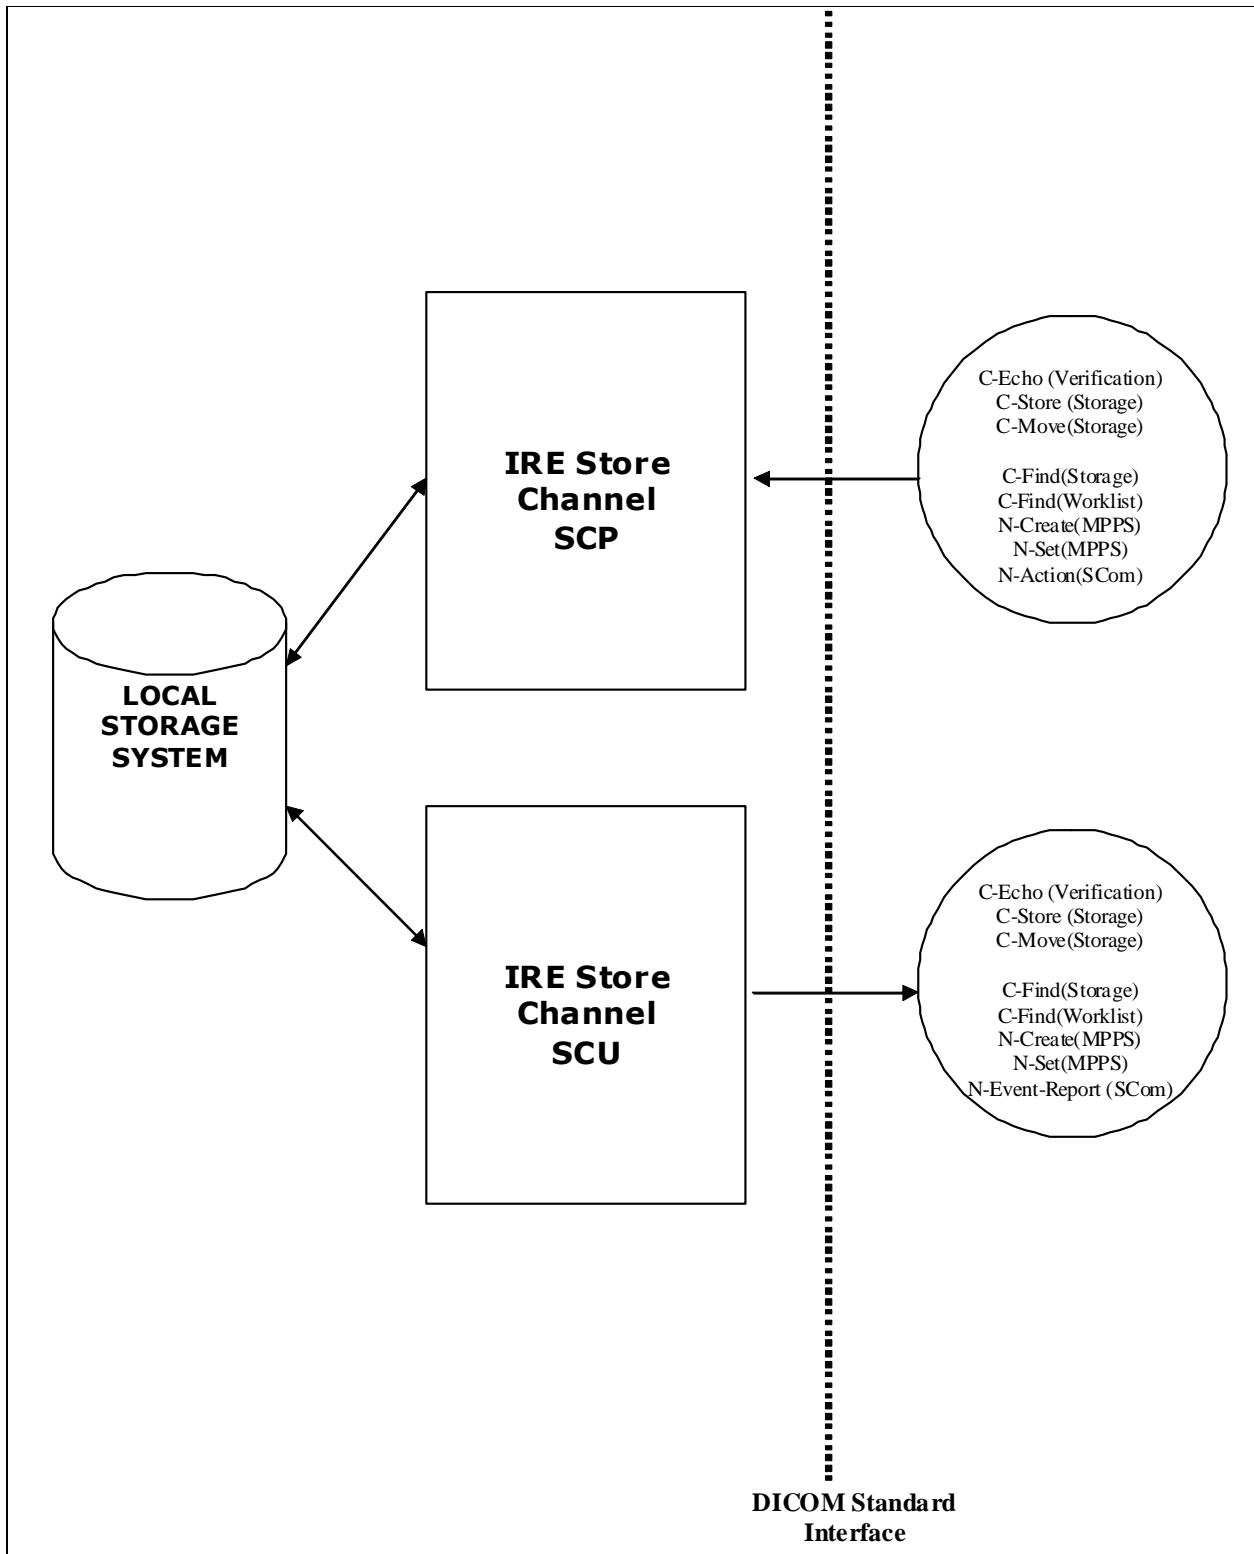

IRE Store Channel is an application running on a dedicated server. It will handle storage and retrieval of images, including searching for them. It can also query other archives for data not contained in its own system.

IRE Store Channel will respond to requests for search, requests for move and request for storage. If necessary, it will issue requests for search and requests for move.

The IRE Store Channel application provides DICOM functionality for the purpose of:

- Network Storage (receive/send images and other composite objects)
- handling of Modality Worklist queries
- handling of Modality Performed Procedure Step requests
- handling of Storage Commitment requests
- handling of Query and Retrieve requests
- Media Storage on Exchangeable Media (read and write).

See following figure for the Application Data Flow Diagram.

2.2 FUNCTIONAL DEFINITIONS OF AE'S

IRE Store Channel waits for another application to connect at the presentation address configured for its Application Entity Title. IRE Store Channel expects any connecting application to be a DICOM application over the TCP/IP protocol stack.

The functions supported by the IRE Store Channel Server application entities are:

SCU	SCP
Verification	Verification
Storage	Storage
Storage Commitment	Query/Retrieve Modality Worklist Management Modality Performed Procedure Step Storage Commitment

2.3 SEQUENCING OF REAL-WORLD ACTIVITIES

2.3.1 Storage SCP

IRE Store Channel can receive images and other DICOM composite objects transmitted over the network from a DICOM Storage SCU Application. Received instances will then be saved in the local storage system and indexed in the database server.

2.3.2 Storage SCU

IRE Store Channel can send images and other DICOM composite objects over the network to a DICOM Storage SCP Application.

This will happen:

- as a consequence of user's interaction
- automatically if auto-routing is configured
- in response to a retrieve request from an authorized remote system

2.3.3 Modality Worklist SCP

IRE Store Channel will receive queries generated by a DICOM Modality Worklist SCU (typically an Acquisition Modality) and will perform the requested query on its internal database. The results of the query will be returned to the SCU (one response for each matching Scheduled Procedure Step).

2.3.4 MPPS SCP

IRE Store Channel will accept Modality Performed Procedure Step requests from a DICOM MPPS SCU.

The SCU will inform IRE Store Channel that a specific Procedure Step has been started (using N-CREATE-RQ messages) and later that this Procedure Step has been completed or discontinued (using N-SET-RQ messages).

2.3.5 Storage Commitment SCP/SCU

IRE Store Channel will accept Storage Commitment requests (N-ACTION-RQ) from a DICOM Storage Commitment SCU.

At a later time and using a different association, IRE Store Channel will inform the SCU that the requested instances have been reliably stored (N-EVENT-REPORT-RQ).

2.3.6 Query/Retrieve SCP

IRE Store Channel will accept Queries (C-FIND-RQ) from a DICOM Query-Retrieve SCU.

IRE Store Channel will accept Retrieve requests (C-MOVE-RQ) from a DICOM Query-Retrieve SCU and will consequently transfer the requested instances using its C-STORE SCU features.

2.3.7 MEDIA STORAGE

IRE Store Channel can read existing images residing on a CD-R and write new images on a CD-R.

The IRE Store Channel Application provides a system utility for burning CD-ROMs.

3 AE SPECIFICATIONS

By default here is only one AE : "GATESTORE" The actual name is configurable. However, the IRE Store Channel, for compatibility purpose, will also accept callings to an additional AE Title composed by adding the "WKL" suffix to the main AE Title, ex. "GATESTOREWKL".

3.2 STORAGE SCP AE

3.2.1 Association Establishment Policies

3.2.1.1 General

The Storage SCP AE accepts associations from remote DICOM Storage SCU applications. The configuration of IRE Store Channel allows to configure such parameters as Application Entity title, host name, and port number. The maximum accepted PDU sizes will be up to 64 KB (65536 bytes).

The SOP class Extended Negotiation is not supported.

3.2.1.2 Number of Associations

The IRE Store Channel supports multiple associations. By default the maximum number of simultaneous associations that the IRE Store Channel will support when it acts as an SCP is 10.

3.2.1.3 Asynchronous Nature

Asynchronous mode is not supported.

3.2.1.4 Association Initiation Policy

Not Applicable.

3.2.1.5 Implementation Identifying Information

The Implementation Class UID is "1.3.6.1.4.1.34289. 4"

The Implementation Version Name "IRESC4"

3.2.1.6 Real-World Activity – Storage SCP

3.2.1.6.1 Associated Real-World Activity

The IRE Store Channel Storage SCP AE has the capability to receive images and other composite objects (f.i. Grayscale Softcopy Presentation States and Key Object Selection Documents), via the Dicom Storage services using the Presentation Contexts defined in the Table shown below, from all the allowed source device(s).

The Storage provider process is listening for incoming instances; when an instance is received, it is stored and indexed locally.

3.2.1.6.2 Acceptable Presentation Context Table

The presentation contexts accepted by the Storage SCP AE are summarized in the following Acceptable Presentation Contexts Table:

3.2.1.6.2.1 SOP Specific Conformance Statement for the Storage SOP Class

The IRE Store Channel Storage SCP AE conforms to the SOPs of the Storage Service Class at Level 2 (Full).

Private data will be preserved.

3.2.1.6.2.2 Presentation Context Acceptance Criterion

All the above listed presentation contexts will be accepted.

New SOP Class or unlisted Presentation Context will be accepted and stored as they are received.

3.2.1.6.2.3 Transfer Syntax Selection Policies

The Storage SCP AE will place the highest priority on the first syntax listed in the Accepted Presentation Contexts Table above, and decreasing priority on following syntaxes. Different lists of syntaxes and different orders can be configured if necessary.

3.3 STORAGE SCU AE

This Application Entity provides Standard Conformance to the following DICOM V3.0 SOP Classes as an SCU:

see table in par.3.3.2.1.2

3.3.1 Association Establishment Policies

3.3.1.1 General

The following DICOM Application Context Name is proposed for all DICOM services:

Application Context Name	1.2.840.10008.3.1.1.1
---------------------------------	------------------------------

The SOP class Extended Negotiation is not supported.

3.3.1.2 Number of Associations

The maximum number of associations initiated by IRE Store Channel acting as Storage SCU is 1.

3.3.1.3 Asynchronous Nature

Asynchronous mode is not supported.

3.3.1.4 Implementation Identifying Information

See par. 3.2.1.5

3.3.2 Association Initiation Policy

IRE Store Channel will initiate an association with a DICOM Storage SCP:

- as a consequence of user's interaction
- automatically if auto-routing is configured
- in response to a retrieve request from an authorized remote system

The called and calling AE Titles are configuration dependent.

3.3.2.1 Real-World Activity – Storage SCU

3.3.2.1.1 Associated Real-World Activity

IRE Store Channel has the capability to send images and other DICOM composite objects via the Dicom Storage services using the Presentation Contexts defined in the Table shown below, to all of the selected destination device(s).

3.3.2.1.2 Proposed Presentation Contexts Table

The presentation contexts proposed by the Storage SCU AE are summarized in the following Proposed Presentation Contexts Table:

Presentation address mapping are configured in the User Interface. The Host Name, Port Number, and Application Title map an Application Entity (AE) Title to a Presentation Address in TCP/IP for the provider to which you wish to connect.

Note: The host name maps to an IP address as specified by the operating system host table. Port Number 104 is the reserved port on PC systems for standard DICOM connectivity. Any valid port number may be used.

6.1.2 Configurable parameters for IRE Store Channel Application

The following parameters are configurable for this AE (Local):

- Local AE Title
- Local IP Address
- Local Port

The following parameters are configurable for each remote AE:

- Remote AE Title
- Responding TCP/IP Port Number
- Remote IP Address

6.2 SUPPORT OF EXTENDED CHARACTER SETS

The character set used on this system is ISO IR 100
